SKILLS

Languages: C++, Python, Java

Tools/Platforms: Google Colab, Kaggle, Vercel, Firebase, Android Studio

Soft Skills: Problem-Solving, Team Player, Adaptability, Quick Learner

PROJECTS

ResQMap | Kotlin, XML

Jul' 26

- Developed ResQMap, a centralized emergency response Android application designed to simplify disaster reporting, SOS communication, and access to relief centres through a single intuitive platform.
- Implemented core emergency-response functionality including Firebase Authentication, GPS-based location detection, manual location entry, Firebase cloud storage, incident reporting, and Android Intent-based SOS communication, with support for Hindi and English interfaces.
- Improved emergency-response accessibility and usability by enabling location-aware reporting, report status and timestamp tracking, bilingual communication, and user-confirmed SOS messaging, providing a strong foundation for future real-time emergency alerts and service integration.

CryptoSight SaaS | Python, JavaScript, colab

May' 26

- Developed an ML-powered cryptocurrency analytics system to analyze historical Bitcoin data and support data-driven market analysis through price prediction, trend identification, volatility analysis, and investor profiling.
- Implemented the complete machine learning pipeline using Python and Scikit-learn, including Regression, Random Forest, AdaBoost, and K-Means clustering for next-day price prediction, 7-day forecasting, volatility classification, trend analysis, and investor segmentation.
- Delivered an API-independent interactive analytics platform using CSV-based historical data, pre-trained ML models, React, and Vite, enabling consistent market predictions, volatility insights, and investor-profile analysis without reliance on real-time cryptocurrency APIs.

Secure Authentication Framework for Operating Systems | React, Tailwind CSS, Supabase

Apr' 26

- Developed a production-style full-stack authentication system to provide secure user authentication, session management, and protection against common authentication threats using React, Node.js, and Supabase.
- Implemented core authentication and security mechanisms including JWT-based sessions, TOTP multi-factor authentication, bcrypt credential verification, server-side session revocation.
- Simulated an end-to-end secure OS authentication pipeline with attack detection, audit logging, and real-time security monitoring, demonstrating practical authentication, threat detection, and session-security capabilities.

TRAINING

LPU

Jun' 26– Jul' 26

Android Development using Kotlin

- Developed Android applications using Kotlin and Android Studio, implementing responsive user interfaces with XML layouts and Jetpack Compose.
- Implemented core Android features including Activity Lifecycle, navigation, intents, UI components, and event handling to build functional mobile applications.
- Integrated Firebase services and APIs for authentication, real-time data management, and enhanced application functionality.

CERTIFICATES

Oracle Cloud Infrastructure Certified AI Foundations Associate | Oracle

Aug' 26

Database Management System Part – 1 | Infosys Springboard

Jul' 26

Database Management System Part - 2 | Infosys Springboard

Jul' 26

Android Build Your First App | Lovely Professional University

Jul' 26

EDUCATION

Lovely Professional University

Bachelor of Technology

Computer Science and Engineering; CGPA: 7.41

Phagwara, Punjab

Aug' 26 – Present

First Step Higher Secondary School

Percentage: 64.4%

Chhindwara, (M.P)

Mar' 22– May' 23
